A test method for botanical identification of petroleum-based and petroleum-refinery waste products. The determination of botanical origin of petroleum-based and petroleum-refinery waste products is a crucial element in studies on the potential environmental and public health effects of these materials. The analytical method described in this report makes use of silica gel chromatography to separate extracts of the waste material into the following botanical fractions: essential oils, phenolic and tannin compounds, carbohydrates, and proteins. Botanical fractions that are not easily available commercially are identified by their presence in standard reference compounds. This method is particularly useful when the botanical origin of a petroleum-based or petroleum-refinery waste product is unknown.

Q: Sorting with duplicates using Closure Table Sorting I'm trying to implement a closure table sort on duplicates, in order to accomplish a search on the data of a duplicate. I have a set of data and I wish to build a closure table for it (a google docs spreadsheet form). I have 2 columns: one for searching and one for sorting. My problem is that I need to build a closure table of the following data: Type | URL ===== 1 | URL1 2 | URL2 2 | URL3 1 | URL1 Then if I search on the second column and click on an empty cell, the table should sort itself: Type | URL ===== 1 | URL1 1 | URL2 2 | URL3 2 | URL4 And if I type the URL of URL1 it should update the type to 1 and the URL to URL1. I'm using Closure Table Sorting, but I have no idea how to manage that issue. Edit: I have found a possible solution, but it seems like a workaround. Can I make use of what I have to make it work? A: I found the solution here: Closure Table | Sorting using the type as the key. The trick is to create a type-array in column 2 and load it with the values of the type column, with each row set to the value of the column. Then, using that array as a key, the sort works as expected. Request an EEO Statement of Non-Discrimination/EEO is the law in Ontario.
