Cucku Backup Crack+ Free Download

Cucku is an easy to use backup software for Windows. With Cucku you can backup almost any folder, customise the backup schedule and switch the backup location from your hard disk to your external drive
How to Use Cucku's Backup: 1. Close all other applications and then launch Cucku. 2. Select "New Backup". 3. On the next page select what exactly do you want to backup. There are 3 options available: a) Select "Backup whole directory", b) Select "Backup specific file types", c) Select "Backup specific folder or directory". In the first case the application will extract the content of the directory to be backed up to an alternative, secondary hard disk. The part of the directory that cannot be extracted will be backed up to a virtual directory. The virtual directory will then contain the backup data for that directory. After your backup the virtual directory will be removed. Therefore, to access the backup data you must browse to the backup directory and then remove the virtual directory by clicking on it. In the second case the application will extract the files that the folder contains from the source disk to a virtual folder. The data will be backed up to the virtual folder. After your backup the virtual folder will be removed. In the third case the application will extract the files that the folder contains from the source disk to a virtual directory. The data will be backed up to the virtual directory. After your backup the virtual directory will be removed. To restore data you have to right click on the appropriate file. This will open the Open With dialog box. In the first case the application will restore files from the secondary disk to the parent directory on the source disk. In the second case the application will restore files to the virtual folder. In the third case the application will restore files to the virtual directory. Note: You must have full admin privileges to make changes to a shared drive or an external drive. File Descriptions: "Whole directory" means that the application will create a new virtual drive and backup the contents of the selected directory to it. "Specific file types" means that the application will extract the contents of the selected folder to a virtual folder if and only if the selected file types are found inside. "Specific folder or directory" means that the application will extract the contents of the selected folder or directory to a virtual folder if and only if the selected file types
