You can control any electrical device directly on your Arduino board. It doesn't matter if you need to send signals to it or read it's inputs. You can also monitor, debug, and otherwise check the operation of your Arduino board. I also have a similar hardware that allows the user to communicate with their phone and turn it off and on through an app. It has been a life saver when I forgot my phone in my car and I needed to turn it off and on while driving. I decided to turn it into a stand alone product, but it's still pretty much the same concept. Here is the link to the app: You can also find more details about it on my product page at: Feel free to contact me if you have any 1d6a3396d6

View Matlab, Simulink and Stateflow models YMV is easy to install. It's wrapped in a user-friendly interface and comes bundled with many customization settings for the view mode. Navigating in YAKINDU Model Viewer is quite similar to using a typical browser. It's capable of opening very large models and it offers support for multiple tabs, which means that multiple files can be kept open at the same time to easily go back and forth. If you're interested in additional UI customization features, it's possible to activate animations as well as to pick another interface theme, color and font theme. By default, scrolling between panes is synchronized in compare viewers but you can disable this. Configure a wide range of settings Keyboard shortcuts are supported for all commands in YMV and can be remapped into anything else. You can also apply a proxy configuration for establishing the Internet connection, manage perspectives (e.g. resources, team sync, debug), perform advanced searches, password-protect the application to restrict the access of other users, and select which plugins to activate at startup (e.g. UI responsiveness monitoring, YMV Eclipse UI). The program worked smoothly on Windows 10 in our tests, using minimal system resources. Taking into account its intuitive interface and practical options, YAKINDU Model Viewer comes in handy to all users interested in a straightforward solution for viewing Matlab, Simulink and Stateflow models. Excellent Pros Easy installation, easy to use, good control of the simulation program Cons Not customizable enough to meet all needs. In particular, there is no tool to display the model in a composite editor and with multiple plots. This is a perfect tool to show the Simulink/Matlab/Stateflow models. The main features are: - It is easy to set, the configuration is simple and powerful. - On Windows, we don't have the difficulties of the macOS with the virtual keyboard or another tools. - It is easy to install with few files and the installation is very fast (install it on the desktop and you will see immediately). - It is very well integrated into the Eclipse IDE, especially in Simulink and Matlab Simulink. - It supports many different languages (Java, Python, C++, Javascript,...) so that there is no need to
