After all, how do you do something with a photograph of a fire hydrant? The answer is to add or change the _color_ of the image so it looks realistic. This includes adding colors and adjusting contrast and brightness. The first step is to make sure that your image is in color. The easiest way to do this is to open the image in Photoshop and look at the background. If you see a solid color, or if the image is in black and white, then your image is in color. In this case, you need to open the image in Photoshop and create a new Photoshop file. Your next step is to make sure your image is a jpeg file.

Suppression of multiple myeloma by targeting Stat3 in human multiple myeloma cells. Multiple myeloma (MM) is a malignancy of the plasma cells that secretes a range of immunoglobulins. Recent advances in genomics of MM have improved our understanding of the molecular mechanisms contributing to the development of the disease. Stat3, a transcription factor, has emerged as a target for immunotherapy in many human malignancies. Here, we investigated the role of Stat3 in the growth and survival of MM cells. We used a group of human MM cell lines and primary MM cells from patients. We investigated the effects of Stat3 inhibition on MM cell proliferation, cell cycle progression, invasion, and induction of apoptosis. The findings in MM cells were compared with those obtained with the use of a constitutively active form of Stat3 in myeloid cell lines. Here, we showed that Stat3 was crucial for MM cell growth and survival. Stat3-dependent growth and survival were mediated by activation of JAK/Stat3 pathway. Stat3 phosphorylation and activation of target genes were suppressed by treatment with a Stat3 inhibitor or dominant-negative Stat3. A Stat3-expressing siRNA suppressed the growth and survival of MM cells in vitro. These findings suggest that activation of Stat3-dependent signaling pathways plays a role in MM cell growth and survival. Moreover, targeting Stat3 may represent a therapeutic strategy for the treatment of MM.iDM: Instant Dota 2 Matchmaking We've just released iDM: Instant Dota 2 Matchmaking which brings instant matchmaking to Dota 2.
