Q: How to express a finite set of inequalities of the form $p(x) \leq q(x)$ in a single equation? Let the sets of polynomials $P = \{ p_1(x), p_2(x),..., p_N(x) \}$ and $Q = \{ q_1(x), q_2(x),..., q_M(x) \}$ each be expressed by a list of n variables $\{x_1,..., x_n \}$. Each polynomial contains one of the following conditions a. x_i is equal to 0 for all i b. $p_i(x) \leq q_i(x)$ for all i Is there any way to express set P in terms of Q as a single polynomial? Some thoughts: I know that if I can express P in terms of Q, I can express P as a function of Q, since $P = \{p_i(x_1,..., x_n)$ where $i = 1, 2,..., N\}$. Could I express this as an equation of n variables using SED-Unsolvability? (EDIT: The polynomials in the set P are each of the form $p_i(x_1,..., x_n)$ where $i = 1, 2,..., N$.) A: I ended up writing a function called constrainedPoly, which generalizes the original question. VIDEO: Crash on I-5 Downtown Tacoma That Injured Three is Being Investigated Three people were injured in a two-vehicle collision in downtown Tacoma today. The crash occurred around 11:25am in the southbound lanes of I-5 just south of E Sumner Street. The driver of one of the vehicles, a Toyota Camry, allegedly ran off of the freeway and struck a pole. The Camry driver and passenger were transported to a local hospital with minor injuries. The driver of a Nissan Teana subsequently reported being involved in a crash with a Toyota minivan. The minivan driver was taken to a local hospital with an undetermined injury. The

The Color Replacement tool is used to replace a color with another color in an image. The Lasso tool is used for selecting an area of the image. The Pen Tool, which resembles a magic marker, allows you to draw lines, curves, and other shapes in your image. The Pencil tool is used to draw on top of an image. The Paths tool is used to draw a series of shapes and patterns on top of an image. This is especially useful for making logos, frames and other textured patterns. The Shapes tools are a set of tools for drawing shapes on top of an image. These tools include the Rectangle tool, Line tool, Ellipse tool, Star tool, and the Arrow tool. You can also use any of these tools with the Pathfinder tool to create custom shapes and patterns. The Spot Healing Brush tool is used to fix small errors on your image. This is especially helpful when you have no eraser tool available or you don't want to mess with the image. The Type tool is used to apply text to an image. There are many different types of text in Photoshop, such as Regular, Bold, Italic, and Underline. The Spot Healing Brush and the Spot Healing Filter are tools that are used to correct and repair spots on your image. The Spot Healing filter has a setting to automatically detect and attempt to repair the damaged area. The Crop tool allows you to remove sections of your image for different purposes. You can crop a picture to remove unnecessary background or protect a main subject from the background. The Zoom tool allows you to magnify and reduce the size of an image. The Shadow and Gradient tools allow you to add shadows and color overlays to your image. The Adjustment tool lets you modify the appearance of an image by changing its exposure, brightness, contrast, and color. The Layers panel is used to organize the image in a hierarchy. You can create more than one layer for different purposes and hide them. The Free Transform tool lets you rotate, skew, translate, scale, and crop your image. The Magic Wand tool is used to select an area of the image based on the color you specified. You can then delete the selected area or move it to another part of the image. The Marquee tool is used for creating selection frames for your images. You can easily select an area of an image without having to first select the whole image. The Gradient tool lets you
