\*243 William J. Andy, Public Defender, and Amy L. Moore, Assistant Public Defender, Tallahassee, for Appellant. Bill McCollum, Attorney General, Tallahassee, for Appellee. PER CURIAM. Affirmed. See *Brown v. State*, 220 So.2d 410 (Fla.1969). HAWKES, C.J., LEWIS and MARSTILLER, JJ., concur. [Ischemic stroke. Analysis of 153 patients and review of the current status in Spain]. Although the ischemic stroke treatment should be multidisciplinary, it is general knowledge that clinical trials and thrombolysis are carried out in the participating centers. Thus, stroke diagnosis and treatment are done in a framework of a multicentric, registry system that is rather representative of clinical practice than of the National Registry. To analyze the principal characteristics of the group of patients treated for ischemic stroke in a registry from the Hospital Universitario Clinico San Carlos during 1991.

Retrospective and observational study. We retrospectively reviewed the clinical records of patients with ischemic stroke admitted to our center during 1991. Clinical variables were analyzed and corrected by weighting and standardized scores for statistical analysis. A total of 301 cases of ischemic stroke were treated, including 153 that were classified as subarachnoid hemorrhages; 50.9% were male, with a mean age of 70.6 years. More than half (53.8%) of the patients were admitted to the Stroke Unit; for those admitted, the average time from onset to admission was 8.5 hours and the average time from admission to treatment was 6.7 hours. A blood

examination was ordered for 93% of the cases; 67.8% of these blood samples were performed within 4 hours of admission. No improvement of outcomes was observed in the ischemic stroke patients during the follow-up period. The patients treated in the Ischemic Stroke Unit improved significantly in the first week (p c6a93da74d
