spoiler there is also another thing. blacklist is missing something. i'm going to continue using the example that my brother used in his review, where the game is made up of a series of "plays" involving the same characters and situations. the first play is tommy lee jones guiding the player down a path. all the subsequent plays are identical to the first - and in fact, it's often more fun to go back and play the earlier ones just for the sheer novelty of the experience. there's no way of doing this in conviction. the original development team consisted of about 50 people, and was made up of specialists in disciplines such as animation, art, characters, game, lighting, modelling, motion, music, programming, qa, sound, texturing and visuals, and was formed in october 1999. the plot of splinter cell

revolves around the u.s. government's efforts to counter terrorism. the main character, government agent sam fisher, must infiltrate a terrorist cell by working as their mole within the fbi and later the nsa. using stealth, he must gain the group's trust, identify their leaders, and stop them from carrying out their scheme. once in the group, he must find out who is giving them their money and information. to do this, he must evade detection, find his targets, and prevent them from carrying out their plans. the story and characters, and much of the setting, was drawn from a story by cornell university doctoral student carolyn golonka. the writers included a former james bond screenwriter, ken follet, and hollywood writer michael goldenberg, who previously worked on quantum of solace and mission: impossible 2. the splinter cell original cast was headed by robert song, who played sam fisher in the games and tv series, and tony todd, who played the man from r.i.p. (which came from the under siege movie), was selected from a pool of more than 1,000 actors to portray the character. the two actors were given a very brief story outline, and were instructed not to interact with one another. fisher became a central character of the game series. in the game, he was a government agent known as the "black-list" for his penchant for using stealth. the character was based on the

character of the same name from the tom clancy's splinter cell video game series, although there was no film counterpart. 5ec8ef588b
