Portable utility that lists the file types found on your computer, lets you make changes to their extensions and context menu entries. Keep it on portable devices The program can be run on your system by opening the executable file (there's no setup included in the process). You can copy it on any USB flash drive or other devices, and take it with you whenever you need to gather information about each file type found on the system. View info about extensions registered on your PC FileTypesMan boasts a clean and straightforward layout that gives users the possibility to perform most operations with just a few clicks. As soon as you run the application, it automatically scans your PC, displays the file extensions, and provides detailed information about them, like name, description, perceived type, flags, modified time, company name, as well as product name, version, and description. The tool lets users export the selected items to HTML, CSV, XML, or plain text format, refresh the current list, and copy the selected information to the clipboard. Replace and add file extensions What's more, you are allowed to replace the file type for the selected item with its original extension, perform search operations, as well as customize the layout of the utility by changing the font, style, and size of the text revealed in the main window. Last but not least, you can add a new file type to the list by giving details about the extension, type name, description, default icon, and perceived type, and applying several advanced operations (e.g. disable the "Never ask me" option, open the files automatically). Add new context menu entries You are given the freedom to assign context menu entries for each file type by giving details about the action name and menu caption. You can manually specify the executable file or pick one from a list with running applications. An overall efficient file manager All in all, FileTypesMan proves to be a reliable application that helps you keep an eye on all file extensions found on your system, replace or add new extensions, as well as edit, delete or add context menu actions.
